

Turn *your* PC into a Professional Training Simulator for Off-Highway Truck Operators!

Just connect and calibrate the **USB-ready** controls, and install and license the Simlog simulation software!

Simlog's Off-Highway Truck Personal Simulator puts you at the controls of a modern heavy hauler. A total of **six Simulation Modules** are provided of increasing difficulty, to bring people up to speed in a carefully planned way. The modules begin with *Controls Familiarization* and conclude with *Complete Haul Cycle* which combines loading, driving, and dumping. There's even a simulated Wheel Loader built right in, to help teach truck spotting. For each Simulation Module, key "Performance Indicators" measure both the productivity and quality of the simulated work.

The price? The commercial software license is just **USD\$6,000**, and this is a one-time-fee. When you consider the costs of taking your equipment out of production for training, and the resulting wear-and-tear due to operator inexperience, this is good value indeed, not to mention the improved safety.

And because "Seeing is believing", we offer **free software evaluation** with no time-out period.

With hundreds of customers around the world training thousands of people every year in mining, forestry, and construction, count on Simlog's Personal Simulators to reduce your training costs and improve your training effectiveness.

To learn more, please contact Simlog today!

Additional Personal Simulators are also available.
